# SFMovies

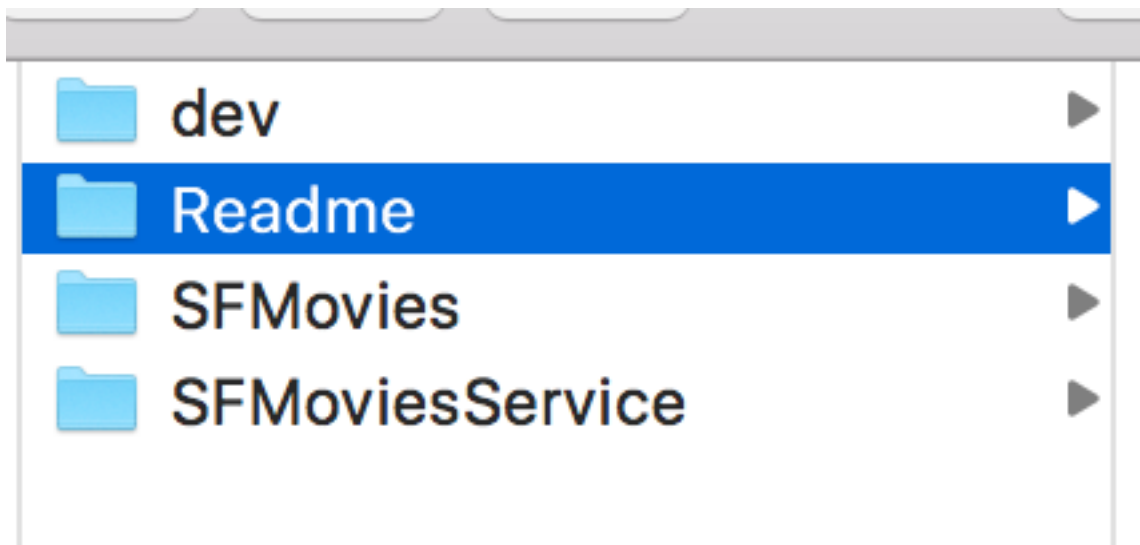

Because Google service can't use in china.  
So If you are in china, you must use VPN.

You can visit <http://imaxli.com:5000/> To view this web application

## 1: Blow is project' picture

## 2: Four Modules :

### Description:

1. dev is a development environment
2. Readme is a introduce
3. SFMovies is front-end publish environment
4. SFMoviesService is back-end publish environment

### Notes:

Front-end and Back-end you must use npm to install some node\_modules.  
You can check it in folder's package.json

## Front-end use technology:

- Vue
- jquery
- webpack
- gulp
- tmod
- artTemplate

Dev: npm run dev to run dev's environment

Publish: use gulp to build publish's environment.

It can see publish folder and gulp scripts

## Back-end use technology

- nodejs-express framework

## 3: RestFul-API

- URL : **http://imaxli.com:3000/getSFMoviesMapInfo**
